Epi-on-the-Island An Introduction to Multilevel Modelling 17-28 August 2020

Tentative Schedule

Day	Time	Lecture	Laboratory	Pages in VER 2
Mon	13:00 - 14:30	(ID-1) Introduction to the course, and (ID-2) Introduction to correlated data		529 - 544
	14:45 - 15:30	(ID-3) Mixed models for continuous data (introduction)		553 - 560
	15:30 - 16:15	(ID-4) Introduction to MLwiN		
	16:15 - 17:00		Introduction to MLwiN	
	17:00 - 18:00	Converting particip	Converting participants' data sets	
	13:00 - 14:00	(ID-3 cont) Mixed models for continuous data (continued)		567 - 571
	14:00 - 15:30		Fitting linear models (#1+2)	
	15:30 - 17:00	(HS-1) Introduction to generalized linear models		408 - 410 452 - 453
	17:00 - 18:00	Converting participants' data sets		
Wed	13:00 - 14:30	(HS-2) Mixed models for discrete data using pseudo/ quasi-likelihood methods		579 - 599
	14:30 - 16:00		Fitting logistic models (#4+5)	
	16:00 - 16:30	(HS-3) Random slopes		560 - 566
	16:30 - 17:00		Random slopes (#3)	
Thu	13:00 - 13:30	(HS-3 cont) Contextual effects		
	13:30 - 14:30		Contextual effects (#3)	
	14:30 - 15:30	(ID-5) Residuals and diagnostics for mixed models		570 - 577 600 - 604

Day	Time	Lecture	Laboratory	Pages in VER 2
	15:30 - 17:00	Assisting participants to get started on their analysis		
Fri	13:00 - 14:30		Evaluating linear and logistic models (#6+7)	
	14:30 - 15:15	(ID-6) Running MLwiN from Stata and R		
	15:15 - 16:00	Assisting participants to get		
	16:00 - 17:00		Wrap-up Exercises 1-7	
Weekend		No scheduled course activity		
Mon	13:00 - 14:30	(ID-7) Alternative approaches to dealing with clustered data		542 - 550 627 - 633
	14:30 - 16:00		Alternative approaches (#8)	
	16:00 - 17:00	Open session for discussion of analysis of own data		
Tue	13:00 - 14:30	(HS-4) Repeated measures data		607 - 627
	14:30 - 16:00		Repeated measures data (#9+10) OR work on own data	
	16:00 - 17:00	Open session for discussion	pen session for discussion of analysis of own data	
Wed	13:00 - 14:30	(HS-5) Computationally complex procedures for fitting multilevel models		594 - 595 637 - 659
	14:30 - 16:00		Computationally complex procedures (#12)	
	16:00 - 17:00	Participants work on own data or a provided dataset		
Thu	13:00 - 14:00		Wrap-up Exercises 8-10+12	
	14:00 - 17:00	Participants work on own data or a provided dataset		
Fri	13:00 - 14:45	Presentations by participants		
	15:00 - 17:00	Presentations by participants, Course wrap-up		

Course Information

Text:

The text for the course will be Veterinary Epidemiologic Research (2009), 2nd edition (<u>http://www.upei.ca/ver</u>). Alternatively, Methods in Epidemiologic Research (2012) (<u>http://www.upei.ca/mer</u>) may be used. Course participants will be provided with the chapters from one of the books that deal specifically with multilevel models.

Software

The primary software used in the course will be MLwiN (<u>http://www.bristol.ac.uk/cmm/software/</u>). Participants wanting to work on it on a laptop computer they bring to the course should download the trial version (valid for 30 days only) or purchase the software before coming to the course. Some use will be made of Stata (a temporary licence will be made available and those wishing to install the program can do so) and of R (participants wishing to use R should have the program installed before coming to the course). We recommend Stata versions 15-16 (preferably with the gllamm package installed) and R version 3.0.1 or later (preferably with the lme4 library installed).

Course Preparation

In order to get the maximum value out of the multilevel modelling course, we encourage participants to bring their own data with them to the course. There will be time during the course to work on your own data and we will endeavour to have lots of help available in the lab sessions to expedite this process. The following actions are recommended:

1. **Prepare a 1 page description of your data** / **problem** using the template attached (next page). These will be copied at the beginning of the course and distributed to all course participants.

2. **Prepare your data (if you are bringing some)**: If you have data of your own which you would like to work on during the course, please bring a prepared dataset with you. Some suggestions for preparing the dataset are:

(a) one record per observation at the lowest level of the hierarchy (e.g. if the dataset contained data from lactations within cows within herds, the dataset should have 1 record per lactation)

(b) make sure that each observation is uniquely identified (e.g. herd id, cow id and lactation number)

(c) identify the key variables of interest and create a dataset with just those variables in it (rather than bringing the whole dataset if it is very large)

(d) if there are a lot of missing values, you might want to prepare a dataset that consists of those observations for which complete data are available

(e) you can bring the data in any computer format you like, but we would suggest that some form of spreadsheet (e.g., Excel or Open Office Calc) would be the easiest to work with (larger files can be brought in any statistical package format – SAS, SPSS, Stata). If you bring the data in a spreadsheet, have the variable names in row 1 and the data immediately below (starting in row 2) - do not include anything else in the spreadsheet.

Multilevel Model Project

Name:
Project Title:
Background: (provide a brief description of the background to your study)
Hypothesis: (what is the most important hypothesis you want to investigate)
Expectations: (what are your expectations in terms of results based on literature or previous work)
Levels of Organization: (list the levels in the hierarchy of your data and the approximate number of units at each level)
Key Dependent Variable: (describe the most important dependent (outcome) variable in your study)
Key Predictor(s): (identify a minimum of one and a maximum of four important predictors in your study and their level in the hierarchy (e.g. farm level variable, cow level variable)

Copies of these sheets will be distributed to all course participants
